

SweatCostToken (STCT) Whitepaper

Abstract:

SweatCostToken (STCT) is a blockchain-based token designed to compensate all laborers around the world. It aims to bridge the gap between work effort and real-world rewards, especially for unpaid or underpaid labor sectors such as volunteer work, hobbies, caregiving, and freelance gigs.

1. Introduction:

STCT is a token that can be distributed to workers as a reward for labor. The token is initially distributed through a presale, with a fixed supply and controlled lock-up release schedules. The project supports staking, airdrops, utility use, and future integrations with companies to replace internal point systems.

2. Tokenomics:

- Token Name: SweatCostToken
- Symbol: STCT
- Total Supply: 1,000,000,000,000,000 STCT
- Network: Binance Smart Chain (BEP-20)

3. Distribution Plan:

- Presale: Limited to 1000 BNB
- Max 2 BNB per wallet
- Presale Lock-up: 30% Immediate, 20% after 2 months, 20% after 4 months, 30% after 6 months
- Future: Airdrops, partner collaborations, reward systems

4. Use Cases:

- Labor compensation through attendance verification
- Rewards for hobbies, caregiving, social good
- Use in partnered platforms for discounts or token-based payments
- NFT incentives for large buyers
- Staking with bonus rates for NFT holders

5. Roadmap:

- Q1 2025: Team formation, token planning
- Q2 2025: Website launch, wallet integration
- Q3 2025: Presale launch, DEX listing, lock-up system
- Q4 2025: Token burn, global partnership expansion
- Q1 2026: Mobile app launch, user acquisition
- Q2 2026: CEX listing, platform integrations
- Q3 2026: Token burn, service expansion

6. Conclusion:

STCT is committed to creating an inclusive economy where every effort is acknowledged and rewarded fairly. We aim to evolve the token ecosystem into a widely adopted labor value system that promotes real-world use, fairness, and transparency.
